

The Online

Smart Power PlanTM Tool

It's fast.

It's unique.

It reduces CO₂.

It gives you control.

**Find out what's
new...**

We've created a
**unique, straightforward,
online application.**

It's designed to calculate in advance the
amount of power that your event needs.

The new web application makes the collection of power information from all event suppliers extremely **easy, quick & efficient.**

Say goodbye to Excel sheets.

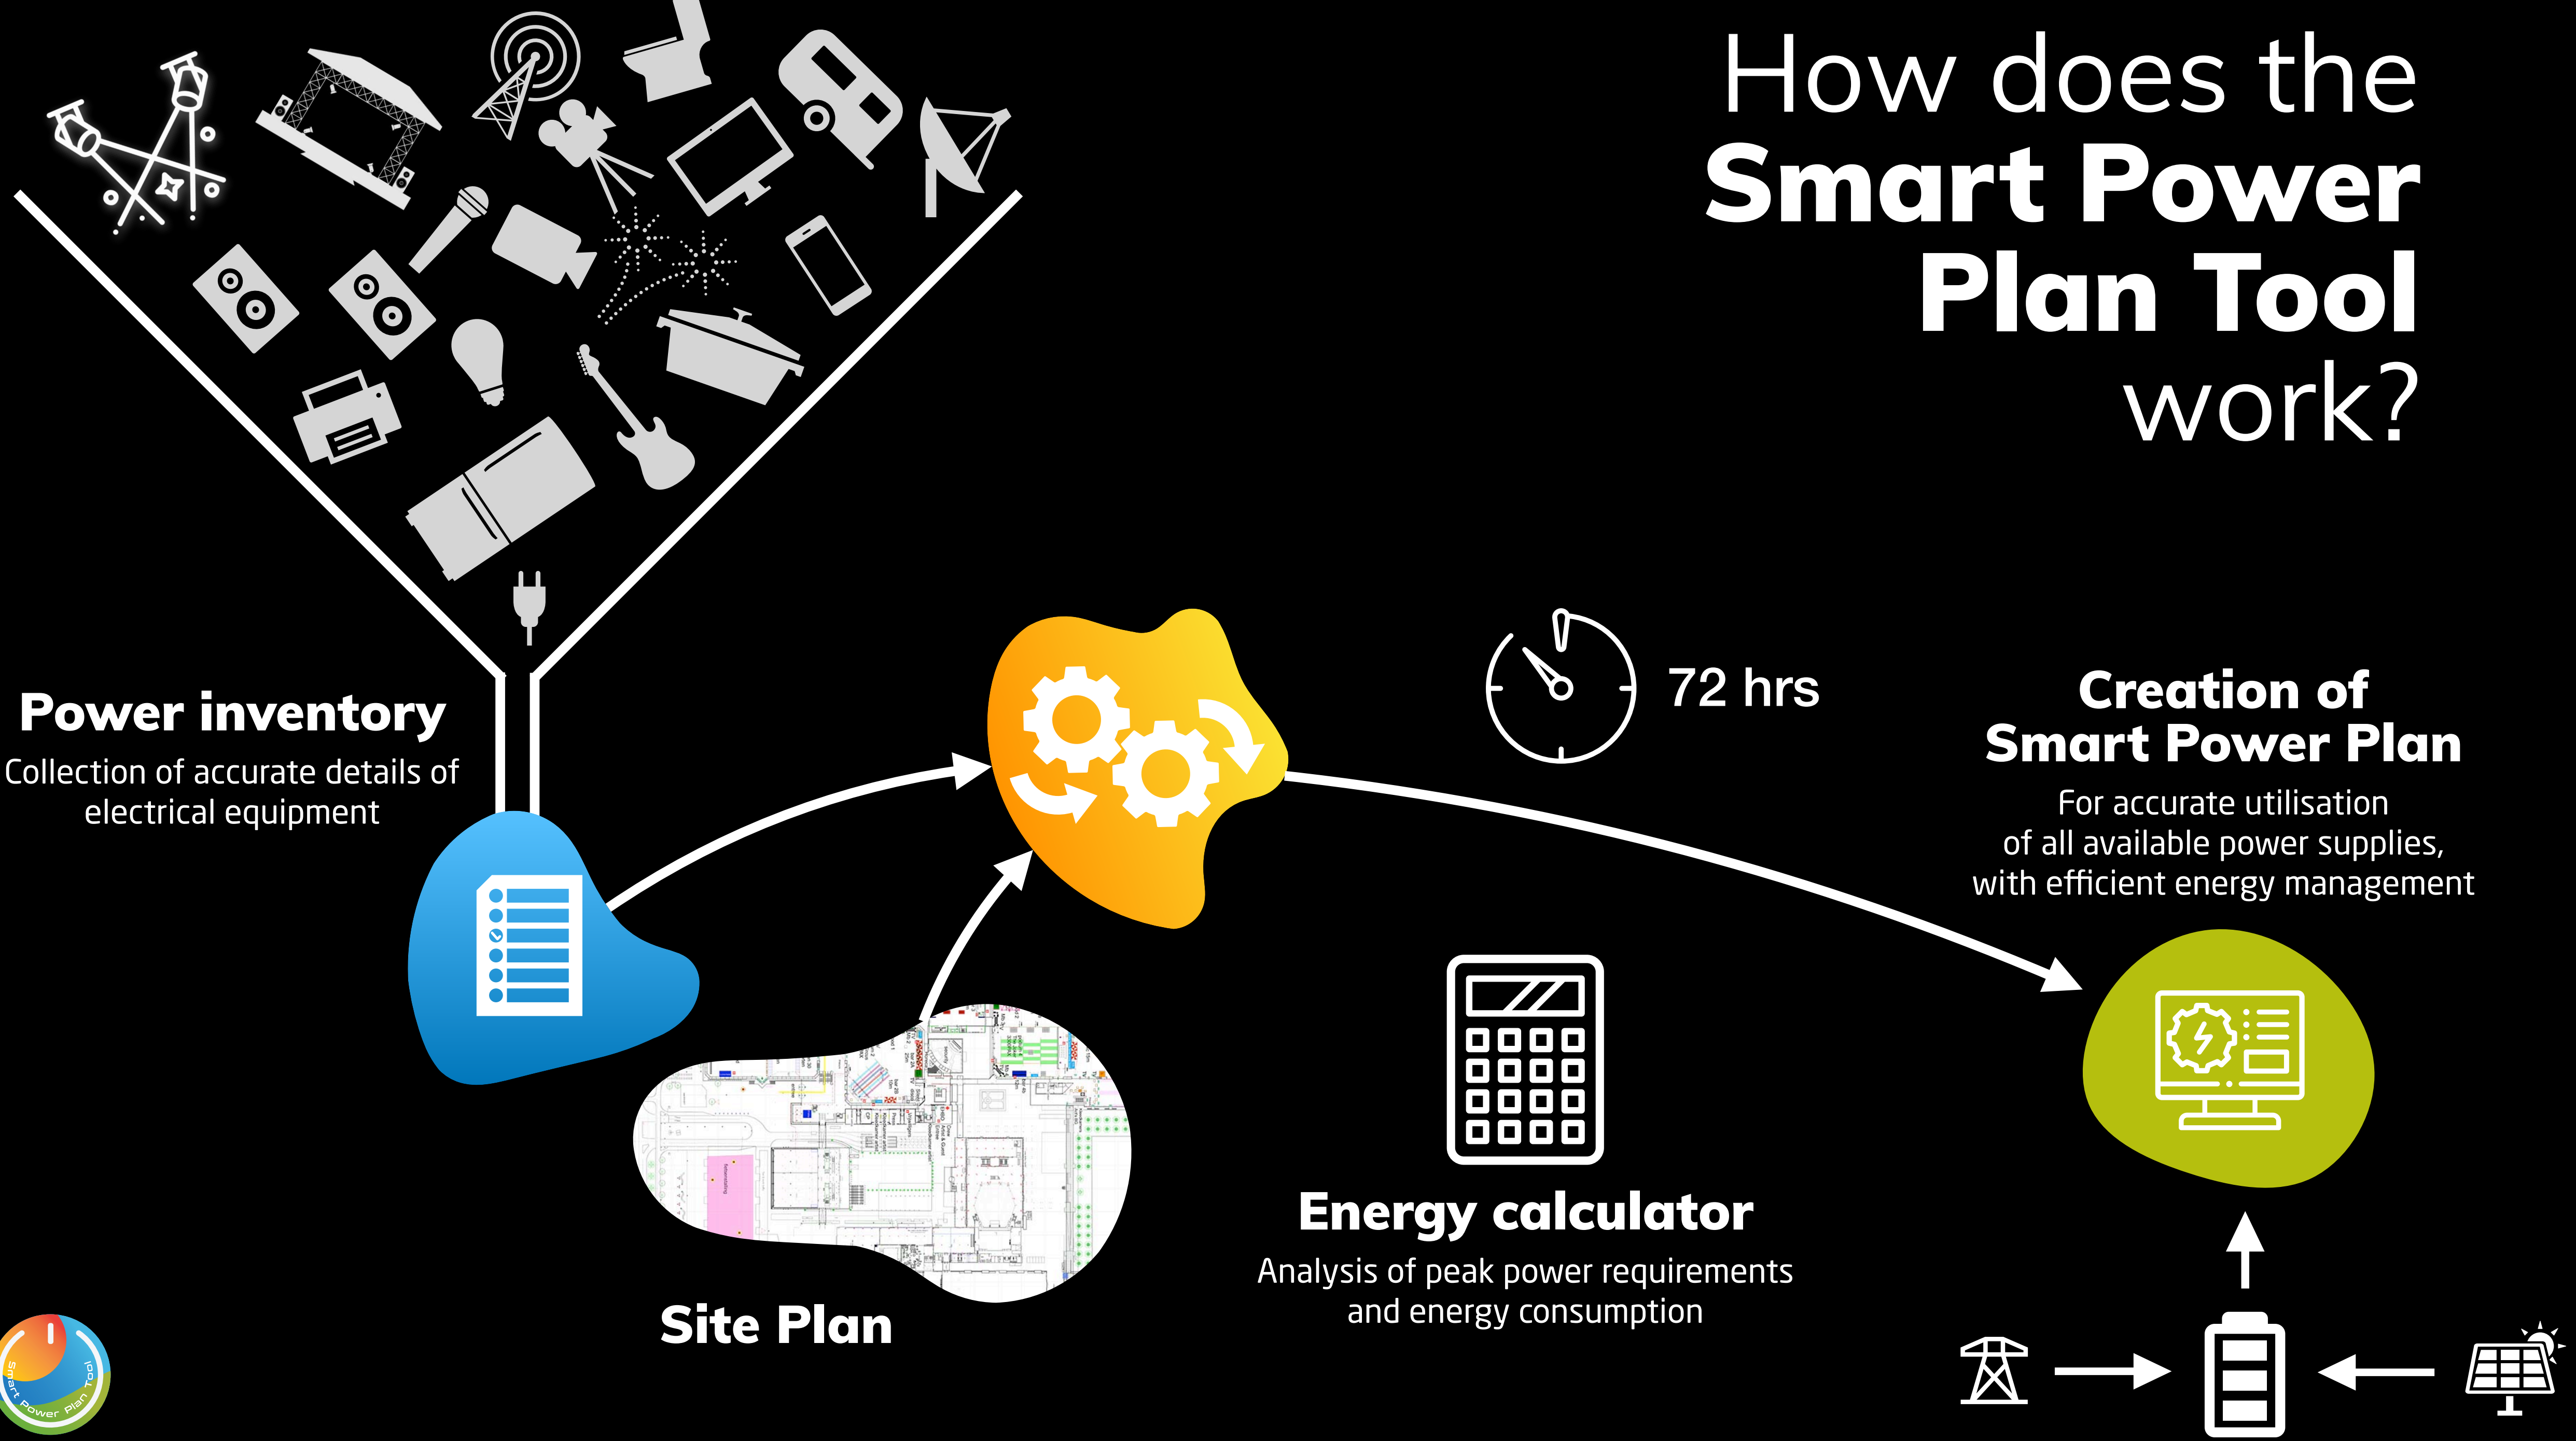

After having submitted all power data,
the tool will calculate your customized
Smart Power Plan within **72 hours**.

The **Smart Power Plan** gives you hands-on insights on how to **increase energy efficiency**, **decrease fuel consumption**, reduce up to **80% of emissions**, use **less generators**, increase the use of **green batteries**, and create the most **reliable power network** for your event.

How does the **Smart Power Plan Tool** work?

Satisfied Clients

“As organisers, we have finally gained insights into and control over our actual power consumption.

***The Smart Power Plan** enabled us to reduce the number of generators and the level of diesel consumption. We wouldn't have been able to achieve this without the help of ZAP Concepts”*

Maarten van 't Veld, Production Manager, Milkshake Festival (NL)

“Despite doubling the power requirements for the event, we managed to remove the need for diesel generators altogether and run entirely on green electricity from the grid, backed up by battery power.

***The Smart Power Plan Tool** was simple for us and our suppliers to use and really cut down the amount of time spent on administration, whilst at the same time making sure we had reliable power. We felt reassured working with ZAP”*

Matt Long, Director, New Citizens (UK)

To
wrap
it up

The Smart Power Plan Tool:

- Simple to use (We mean: **REALLY** simple)
- Made & used by the experts
- Time & cost efficient
- Saves you fuel and energy
- Gives you real insight into your power use
 - Accurate
 - Reliable
 - Quick

Sustainable.
